

I am a building contractor, and I wanted to comment on the quality of your Insultex house wrap. Recently, a customer requested that I install your product on their home. I was very impressed that your product was light-weight, pliable, water-resistant, easy to install, and in addition had an R-3 factor. I liked the fact that the Insultex house wrap comes in rolls of 5'x100' versus other brands that are only 4'x40'. My customer told me that he has had substantial energy savings since the R3 housewrap was installed.

Also, I see that you now have an R-6 wrap that is only 1.5 mm thick. The R-6 would allow you to achieve an R-19 with 2x4 constructions, or an R-25 with 2x6 constructions. The savings in heat and air conditioning costs would be significant. I would recommend this product for all remodeling and new home construction jobs.
